

THE COMPETITIVE EDGE

Editor: Zeev N. Kain MD, MBA

Sept 19th | Issue 24

INSIGHT OF THE WEEK

There is conflicting evidence for the use of cannabinoids in the management of pain. While cannabinoids have shown efficacy in treating specific chronic pain subtypes such as neuropathic pain, fibromyalgia pain, and geriatric pain, they do not show as clear benefit in acute postoperative and the majority of musculoskeletal pain syndromes. This review summarizes the data in the space and is important for us as we address specific requests from challenging patients.
